

Test

1. Draw a rough sketch of a triangle ABC. Mark a point P in its interior and a point Q in its exterior. Is the point A in its exterior or in its interior?

2. From the figure, identify:

- (a) the centre of circle
- (b) three radii
- (c) a diameter
- (d) a chord
- (e) two points in the interior
- (f) a point in the exterior
- (g) a sector
- (h) a segment

3. From the following figure, identify
 - a. Pair of intersecting lines
 - b. Pair of parallel lines
 - c. Concurrent lines at point A.

4. In Fig, name:

- (i) Five line segments
- (ii) Five rays
- (iii) Non-intersecting line segments

5. Classify each one of the following angles as right, straight, acute, obtuse or reflex:

6. Name the types of following triangles:

- (a) Triangle with lengths of sides 7 cm, 8 cm and 9 cm.
- (b) $\triangle ABC$ with $AB = 8.7$ cm, $AC = 7$ cm and $BC = 6$ cm.
- (c) $\triangle PQR$ such that $PQ = QR = PR = 5$ cm.
- (d) $\triangle DEF$ with $\angle D = 90^\circ$
- (e) $\triangle XYZ$ with $\angle Y = 90^\circ$ and $XY = YZ$.
- (f) $\triangle LMN$ with $\angle L = 30^\circ$, $\angle M = 70^\circ$ and $\angle N = 80^\circ$.

7. Give reasons for the following:

- (a) A square can be thought of as a special rectangle.
- (b) A rectangle can be thought of as a special parallelogram.
- (c) A square can be thought of as a special rhombus.
- (d) Squares, rectangles, parallelograms are all quadrilaterals.

- (e) Square is also a parallelogram.
8. Draw a rough sketch of a regular hexagon. Connecting any three of its vertices, draw a triangle. Identify the type of the triangle you have drawn.
9. For the cuboid shown in Fig.
- What is the base of this cuboid?
 - What are the lateral faces of this cuboid?
 - Name one pair of opposite faces. How many pairs of opposite faces are there? Name them.
 - Name all the faces of this cuboid which have X as a vertex. Also, name those which have VW as a side
 - Name the edges of this cuboid which meet at the vertex P. Also, name those faces which meet at this vertex.

10. Draw a diagram to represent a cube. Label its vertices as A, B, C, D, E, F, G and H. Now write the names of its faces and edges.
11. Fill in the blanks to make the following statements true:
- A cuboid has vertices.
 - A cuboid has edges
 - A cuboid has Faces.
 - The number of lateral faces of a cuboid is
 - A cuboid, all of whose edges are equal, is called a
 - Two adjacent faces of a cuboid meet in a line segment called its

(vii) Each edge of a cuboid can be obtained as a line segment in which two meet.

(viii)edges of a cube (or cuboid) meet at each of its vertices.

(ix) A is a cuboid in which all six faces are squares.

(x) The three concurrent edges of a cuboid meet at a point called the of the cuboid.

12. In the figure, l is the line of symmetry. Complete the diagram to make it symmetric.

13. Find the number of lines of symmetry for each of the following shapes :

(a)

(b)

(c)

(d)

(e)

(f)

(g)

(h)

(i)

14. Complete the following table.

Shape	Rough figure	Number of lines of symmetry
Equilateral triangle		3
Square		
Rectangle		
Isosceles triangle		
Rhombus		
Circle		

15. Draw any circle and mark points A, B and C such that
- (a) A is on the circle.
 - (b) B is in the interior of the circle.
 - (c) C is in the exterior of the circle.
16. Given $\overline{AB}$ of length 3.9 cm, construct $\overline{PQ}$ such that the length of $\overline{PQ}$ is twice that of $\overline{AB}$. Verify by measurement.
17. Draw an angle of measure 147° and construct its bisector.
18. Construct with ruler and compasses, angles of following measures:
- (a) 60°
 - (b) 30°
 - (c) 90°
 - (d) 120°
 - (e) 45°
 - (f) 135°
19. Find the value of the following:
- (a) $297 \times 17 + 297 \times 3$
 - (b) $54279 \times 92 + 8 \times 54279$
 - (c) $81265 \times 169 - 81265 \times 69$
 - (d) $3845 \times 5 \times 782 + 769 \times 25 \times 218$
20. Find
- (a) $35 - (20)$
 - (b) $72 - (90)$
 - (c) $(-15) - (-18)$
 - (d) $(-20) - (13)$
 - (e) $23 - (-12)$
 - (f) $(-32) - (-40)$
